Competition and Coexistence

By Sommer, Ulrich / Worm, Boris

Book Condition: New. Publisher/Verlag: Springer, Berlin | The question "Why are there so many species?" has puzzled ecologist for a long time. Initially, an academic question, it has gained practical interest by the recent awareness of global biodiversity loss. Species diversity in local ecosystems has always been discussed in relation to the problem of competitive exclusion and the apparent contradiction between the competitive exclusion principle and the overwhelming richness of species found in nature. Competition as a mechanism structuring ecological communities has never been uncontroversial. Not only its importance but even its existence have been debated. On the one extreme, some ecologists have taken competition for granted and have used it as an explanation by default if the distribution of a species was more restricted than could be explained by physiology and dispersal history. For decades, competition has been a core mechanism behind popular concepts like ecological niche, succession, limiting similarity, and character displacement, among others. For some, competition has almost become synonymous with the Darwinian "struggle for existence", although simple plausibility should tell us that organisms have to struggle against much more than competitors, e.g. predators, parasites, pathogens, and environmental harshness. | 1 Introduction.-...

Reviews

It is one of the most popular ebook. It usually fails to price an excessive amount of. It has been printed in an extremely basic way in fact it is merely right after I finished reading through this book in which really altered me, change the way I believe.

-- **Sigrid Brown**

Absolutely one of the best pdf we have ever read. I really could comprehend every little thing using this written ebook. I am easily could get a satisfaction of reading a written publication.
